TECHNICAL SKILLS

Programming Languages: Python, Java, C, C++

Web Technologies: HTML5, CSS3, JavaScript, React.js

Databases: MySQL, MongoDB

Artificial Intelligence & Machine Learning: Machine Learning, Deep Learning, Natural Language Processing (NLP), Classification Algorithms, Data Analysis, Feature Engineering, Model Evaluation

Frameworks & Libraries: TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib

Developer Tools: Git, GitHub, Visual Studio Code, Google Colab, Jupyter Notebook

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems

ACHIEVEMENTS

- Secured Semi-Finalist position in Thinkathon for the innovative "Health Vault" healthcare management project.
- Regularly practice Data Structures and Algorithms on LeetCode to enhance coding proficiency and analytical thinking.
- Presented research papers at technical symposiums and engineering events.
- Built AI/ML applications including Fake Review Detection, Graph-Based Virus Spread Simulation, and Health Vault.

EDUCATION

Kongu Engineering College, Erode
B.Tech – Artificial Intelligence & Machine Learning
CGPA: 7.94/10 | Expected Graduation: 2028
Maharishi International Residential School,
Sriperumbudur
CBSE (Class XII) – 68% | 2024
Maharishi International Residential School,
Sriperumbudur
CBSE (Class X) – 72% | 2022

PROFESSIONAL SUMMARY

AI & Machine Learning undergraduate with hands-on experience in Machine Learning, Deep Learning, Natural Language Processing (NLP), and Full-Stack Web Development. Proficient in Python, Java, TensorFlow, Scikit-learn, React, and MongoDB, with practical experience developing AI-driven applications, data analysis solutions, and intelligent software systems. Passionate about solving real-world problems through data-driven decision-making, software engineering, and emerging AI technologies while continuously improving problem-solving and algorithmic skills.

PROJECTS

Fake Review Detection using Machine Learning Technologies: Python, Scikit-learn, TF-IDF, Logistic Regression, Naive Bayes

- Built an NLP-based fake review classification system for identifying deceptive online reviews.
- Performed text preprocessing, TF-IDF vectorization, and feature extraction.
- Compared multiple machine learning algorithms including Logistic Regression and Naive Bayes.
- Achieved 88.9% classification accuracy using Logistic Regression.

Health Vault – Patient Health Information Management System

Technologies: React.js, MongoDB, JavaScript, HTML, CSS

- Developed a secure web application for storing and managing patient health records.
- Designed a responsive user interface using React.js.
- Implemented MongoDB database integration for efficient medical record management.
- Focused on scalability, usability, and organized healthcare data storage.

Graph-Based Virus Spread Simulation

Technologies: Python, Graph Algorithms

- Developed a graph-based simulation model to analyze infectious disease transmission.
- Modeled disease propagation across interconnected nodes using graph traversal techniques.
- Visualized infection spread patterns to better understand epidemic behavior and network dynamics.

CERTIFICATIONS

- C,C++ Programming
- Advanced C programming
- Advanced Data Structures Using Java
